### **DETAILED ACTION**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 28 September 2005 has been entered.

### ***Allowable Subject Matter***

Claims 1-3 and 5-12 are allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance:

Re claims 1-3: The best prior art discloses a method for generating an x-ray beam, the method comprising the steps of: operating a cathode, directing the electron beam from the cathode through a selectable shaped aperture in an accelerating electrode and impinging the electron beam at an acute angle on the anode surface. However, the prior art fails to teach or fairly suggest a method of generating an x-ray beam, wherein the accelerating electrode is positioned in a central recess of the anode surface, as claimed in claim 1. Claims 2 and 3 are allowed by virtue of their dependency.

Re claims 5-7: The best prior art discloses an x-ray source comprising: a cathode, an accelerating electrode comprising a selectable shaped aperture and an

Art Unit: 2882

anode. However, the prior art fails to teach or fairly suggest an x-ray source wherein the accelerating electrode is positioned in a central recess of the anode surface, as claimed in claim 5. Claims 6 and 7 are allowed by virtue of their dependency.

Re claims 8-10: The best prior art discloses an imaging system comprising a gantry, a detector and an x-ray source coupled to the gantry, wherein the x-ray source comprises: a cathode, an accelerating electrode comprising a selectable shaped aperture and an anode. However, the prior art fails to teach or fairly suggest an imaging system comprising an x-ray source wherein the accelerating electrode is positioned in a central recess of the anode surface, as claimed in claim 8. Claims 9 and 10 are allowed by virtue of their dependency.

Re claims 11 and 12: The best prior art of record discloses an x-ray source comprising: means for generating an electron beam, means for accelerating electrons away from the generating means and means for generating x-ray beams when the electron beam impinges thereon at an acute angle. However, the prior art fails to teach or fairly suggest an x-ray source, wherein the means for accelerating electrons is located in a central recess of an anode surface, as claimed in claim 11. Claim 12 is allowed by virtue of its dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
